

Lid in Lid

with optional Restrictor Plate

Following consultative research with customers, the Taylor Lid in Lid is exactly that, a lid within a lid, but with a number of benefits.

Lid in Lid with optional Restrictor Plate

Though the importance of recycling is understood, one of the greatest obstacles faced in the waste management and recycling sector is consumer participation - often because they believe it is much harder than it is, or that the items they fail to recycle correctly will be of little consequence.

The truth is that recycling has never been easier, yet the impact of contaminated waste on budgets, greater than ever.

One of the simplest ways to solve this is to provide easy to access and utilise recycling bins, banks and containers which can help prevent waste contamination at its source.

Taylor have created the Lid in Lid with waste segregation in mind. Additional restrictor plates are available in a range of aperture shapes and sizes to control specific waste streams, enabling waste segregation at source and preventing possible contamination.

Benefits

- Flap opening 710mm x 380mm
- The lid flap is easier to open as the flap is lighter
- Located at the front of the bin, consumers do not have to reach to open the lid flap
- Range of locking options available
- Range of standard and custom Restrictor plates are available to suit the waste stream
