

Urban Solutions

Node°, Street II, Textile Bank & Bin Frames

By bringing aesthetic, practical and tough waste collection and on street recycling solutions to communal and open spaces our Urban Solutions range is leading the way in raising participation rates in high density housing areas where involvement's traditionally low and with recycling on the go projects.

Urban Solutions

Taylor Node°

The Node° system offers a proven way to increase waste and on street recycling participation in locations such as high and low rise flats, where more traditional collection methods such as kerbside collections are not practical.

Through its distinctive appearance and ingenious design, the Node° mini-recycling centre attracts attention, offering a radical alternative to the conventional look of the standard waste recycling bin to increase recycling.

Part of our Urban Solutions range, the Node°'s modular system means that one to four units (Node 90°, Node 180°, Node 270° and Node 360°) can be configured to give a maximum 3,200 litres of capacity. In a footprint of less than a car parking space!

Street II

With an increasing focus on the appearance of open spaces in parks and new housing developments with a drive to remove unsightly on-street waste and recycling containers, we have created a compact and cost-effective container housing.

Taylor Street II is perfect for high footfall areas and high density housing where waste can soon fill and then overflow from standard, low capacity recycling and collection bins – both off-putting for the public and time-consuming to tidy up.

Textile Bank

The Taylor Textile Bank offers a high capacity collection point within the size of a parking space.

The shute has been developed to prevent theft due to a back plate behind the door of a shute. With a body made of durable steel and externally welded seams. The Taylor Textile Bank keeps the contents dry and ensures long service for years to come.

Combined with the latest fill level technology and access control systems Taylor can provide solutions to significantly improve the operational and management effectiveness.

Locking Frames

Secure your bins and prevent unauthorised access by utilising Taylor Bin Frames in your local area.

Ideal for recycling on the go, high footfall areas, high density housing, parks, bring sites and new housing developments; Taylor 4 Wheeled Bin Frames are aesthetically pleasing and can be easily installed!

Each bin frame has a locking access gate, through which bin crews can easily gain access to the bin. The frame design allows bin crews to efficiently gain access to the bin, empty it and then easily return it.
